

ENVIRONMENT

Objectives for a Resilient Fitzrovia

The feedback shows that both residents and local businesses seek a more sustainable neighbourhood.

Our proposals to achieve this are:

- Development or change in FitzWest should contribute to reductions in noise, air pollution, water run-off and heat stress
- All new development should be to the highest environmental standards
- Require sustainable street improvements adjacent to all major developments. e.g. greening, seating, cycle stands etc.
- Provide clean and discreet recycling points paid for by new development
- Reduce polluting traffic and air conditioning units
- Support electric public/private transport in FitzWest.
